

Precision Automatic Drain Kits

PWS AED-1

PWS AED-2

The Precision Auto Drain Kits will automatically drain the impurities out of the boiling chamber after each cycle is completed. This unit is designed to reduce the amount of mineral build up on the element, float and the inside walls of the boiling chamber, as the more often these impurities are removed, the less often manual cleaning of the boiling chamber will be required. This is especially true in hard water areas. This unit can be added at any time with very little assembly required.
