splash guard 6" (15.24cm) x 24 1/8" (61.28cm) d  
Weight: 105lbs (47.6kg)

Attractively positioned in a water store, the BF-4 Bottle Filler is an ideal market entry bottled water product.

Manufactured from high-grade #304 surgical stainless steel with a polished finish, the rugged and durable BF-4 Bottle Filler is built for years of trouble free service.

This simple and easy-to-use equipment was designed by our engineers, who know what is needed for a small bottle filling business.

Four separate fill stations allow for a growing water business. The BF-4 adjustable gooseneck filling system accommodates various bottle sizes. The Bottle Filler can be easily moved to another location if necessary.

With a limited amount of moving parts, you can be guaranteed fewer breakdowns. Smart maintenance features include a 6" back splash guard that prevents water from spilling over and a removable tubular drip grate for cleaning and sanitizing the bottom tray of the filler.

It's easy to get started in the bottle filling business using the BF-4. Flexible 3/4" tubing is attached to the end of the goose neck filler which is connected to a pure water supply.

A ball valve and fill guard protector round out the many features of the BF-4 Bottle Filler.
