splash guard 6" (15.24cm) x 24 3/8" (64.45cm) d
Weight: 42lbs (19.05kg)

Attractively positioned in a water store, the CBF-3 Bottle Filler is an ideal market entry bottled water filling product.

Manufactured from high-grade #304 surgical stainless steel with a polished finish, the rugged and durable CBF-3 Bottle Filler is built for years of trouble free service.

This simple and easy-to-use equipment was designed by our engineers, who know what is needed for a small bottle filling business.

Three separate filling stations allow for water filling expansion. The CBF-3 adjustable gooseneck filling system accommodates various bottle sizes.

With a limited amount of moving parts, you can be guaranteed fewer breakdowns. With maintenance features that include a 6" Back splash guard and a removable grate for cleaning and sanitizing, you will have an outstanding economically priced product.

It's easy to get started in the bottle filling business using the CBF-3. Flexible 3/4" tubing is attached to the end of 1" tubing which distributes pure water from your storage tank into bottle.

A ball valve and fill guard protector round out the many features of the CBF-3 Bottle Filler.

Add on to an existing bottled water operation and build right on to a present counter.

All specifications are subject to change without notice.
