Complete Distillers Parts Repair

## Switch base 120/240V Trouble Shooting

**Warning electrical shock! Unplug water distiller before removing front panel to make any adjustments.**

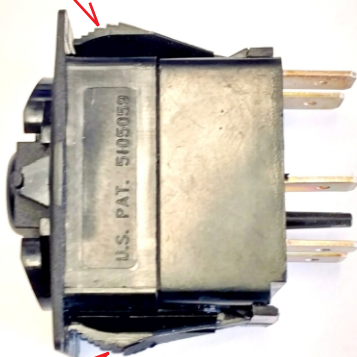

- With switch base in the on position, continuity should occur between spades #2 and #3 only.
- With switch base in the off position, no continuity should occur between any spades.

### Switch Base Removal

- Apply pressure to the top and bottom tabs and move away from distiller panel. Tough fingers may work or tools maybe required.

2 qty Top Tabs

2 qty Lower Tabs

### Switch Cover Removal

- The switch covers snap onto the base and are held by two tabs on both sides of base. The switch pivots at this point. You may purchase the switch cover removal tool, part# 080134 or apply equal pulling pressure to the top and bottom of the cover and pop it off. A small flat screw driver maybe carefully used to pop the cover off as well.

Recommended tools:

- Multi-Voltage Meter (or conductance meter)
- Flash light or good source of lighting
- #2 Square drive or Flat head screwdriver
- Channel locks, pliers, or large needle nose pliers.
